

ABSTRACT

USE OF WINLOG ON BUILDING MANAGEMENT SYSTEM CONVENTION HALL BUILDING, BUNG HATTA UNIVERSITY

Abstrack

BMS stands for Building Management System. Building Management System is an application system that is a combination of technology and services that are specific to the home or building environment with certain functions that aim to control all systems in the building, such as lighting, air-conditioning systems and so on. Winlog Pro software is used for the Building Management System implementation which will give a more real picture of the system in question. So, a simulation system is used using the Winlog Pro application that can be integrated with the concept of Building Management System, so that it can facilitate the operator in monitoring and controlling the system in the Bung Hatta University Convention Hall just by using a laptop or computer.

Keywords: *Building Management System, Software, Winlog Pro, Computer, Operators*
