

## **BAB V**

### **PENUTUP**

#### **5.1 Kesimpulan**

Merujuk pada hasil analisis dan pembahasan yang telah diuraikan dalam BAB IV, beberapa kesimpulan dapat ditarik sebagai berikut:

- 1) Analisis kekuatan struktur bagian atas Jembatan Krueng Nalan telah dilakukan dengan menggunakan perangkat lunak Midas Civil 2022. Struktur jembatan yang memiliki 5 girder dengan bentang 40 m dan jarak antar girder 2,1 m menunjukkan nilai momen ultimit sebesar 11949,8031 kNm, torsi ultimit sebesar 188,9203 kNm, dan gaya geser ultimit mencapai 1058,7811 kN. Kombinasi pembebanan dalam analisis ini mengacu pada peraturan SNI 1725-2016 perihal “Pembebanan Jembatan” serta SNI 2833-2016 perihal “Perencanaan Jembatan Terhadap Beban Gempa”.
- 2) Menggunakan perangkat lunak Midas Civil 2022, analisis lendutan PCI girder pada Jembatan Krueng Nalan yang memiliki 5 girder dengan bentang 40 m dan jarak antar girder 2,1 m menghasilkan nilai lendutan sebesar 0,0586 m. Nilai ini memenuhi persyaratan yang ditetapkan dalam RSNI T 12-2004 Pasal 9.2.1, dimana lendutan maksimal harus lebih kecil dari  $L/250$  yaitu 0,16 m. Analisis ini menggunakan kombinasi pembebanan sesuai dengan peraturan SNI 1725-2016 perihal “Pembebanan Jembatan” serta SNI 2833-2016 perihal “Perencanaan Jembatan Terhadap Beban Gempa”.

#### **5.2 Saran**

Berikut adalah beberapa saran yang dapat penulis sampaikan berdasarkan hasil analisis yang telah dilakukan:

- 1) Untuk penelitian selanjutnya, direkomendasikan untuk melakukan analisis pada struktur jembatan yang lebih kompleks sehingga dapat menghasilkan analisis struktur yang lebih mendetail dan komprehensif.
- 2) Penelitian berikutnya disarankan untuk mengkaji faktor-faktor eksternal dari struktur jembatan, termasuk aspek ekonomis dan metodologi pelaksanaan pekerjaan yang diterapkan.
