ABSTRACT

This study aims to empirically examine the effect of debt level, foreign liability, debt maturity, and growth opportunity on hedging decisions. One form of the phenomenon is that there are still many non manufacturing companies that are reluctant to hedge.

The population in this study are Non Manufacturing Companies listed on the Indonesia Stock Exchange in 2016-2018. The sample of this study are 74 companies that had transaction exposures and had complete data to study. From the test results obtained that the independent variables in this study are only able to explain the dependent variable by 22,1 and 77,9% of hedging decisions were influenced by other independent variables not used in this study.

Based on the results of the study showed that debt level, and debt maturity affect hedging decisions, while foreign liabilities and growth opportunity have no effect on hedging decisions.

Keywords: Hedging, Debt Level, Foreign Liability, Debt Maturity and Growth Opportunity.
