ABSTRACT

The Nusantara Fishery Port (PPN) Palabuhanratu has a wide range of potential fishery resources, both in terms of biological, non-biological, and environmental resources. This study aims to analyze the role (PPN) of Palabuhanratu on operational fishing services and to analyze the satisfaction level of fishermen with fishing operational services at (PPN) Palabuhanratu. The method used is purposive sampling method. The data is analyzed by technical analysis, importance and performance analysis (IPA) and customer satisfaction index (CSI). The results showed that overall the main facilities, functional facilities and supporting facilities at PPN Palabuhanratu are fairly complete and in good condition, including the ice factory conditions that can meet the needs of fishermen at PPN Palabuhanratu. In addition, there are reforms such as SPBN for refilling fuel oil (BBM); The level of satisfaction of fishermen with services for fishing needs at PPN Palabuhanratu is obtained from the CSI calculation of each service attribute, namely the service needs of diesel fuel 90% (very satisfied), SPB needs 94.4% (satisfied), SHTI needs 96.4% (satisfied), as well as facilities and services services 97.2% (satisfied) this value shows that the overall fishermen are satisfied with port services and facilities.
