

CHAPTER V

CONCLUSION AND SUGGESTIONS

This chapter presents conclusions that are based on the researcher result and discussion based on the previous chapter. It also present some suggestions for the further researchers who wants to do the research is cooperative principle.

5.1 Conclusion

Pragmatics is an area of language that involves rules about the use of language in social contexts. To be accepted in a language society, a speaker needs to fully understand the rules that apply in that community, including understanding of the appropriate and correct use of certain language functions or speech acts. Politeness is an important issue in pragmatics. Politeness is needed to maintain smooth communication between speakers and listeners because it is related to the rescue efforts of each other's faces. A concrete example of the most threatening action is cooperative principle. This can be understood when viewed from the function of conversatinn in terms that language has a directive function that regulates the behavior of the listener.

Based on the research findings, it can be concluded that there are some points which can answer the research question. The classification of kinds cooperative principle that occured in the conversation of the interview Prince Harry and Meghan Markle includes four types,quantity,quality,relation,andmanner. They are violated the maxims because there are implied meaning that makes them violated all the maxims, that is they dont want too much exposed their relationship to the public. And they distract the topic and give another information.

On this research, the researcher found 50 data of the types cooperative principle and violating of maxim they are found 14 data. And total data that researcher founded is 64 data for all research question. Maxim quality is mostly used in conversations between the Prince

Harry and Meghan Markle because the question is about their assumption or opinion that tells the story of Royal Family in United Kingdom. Maxim quality is it attempts by the speaker to get the listener to get information in conversation then most of the data from this transcript interview.

In this transcription, the conversation it has many violation in maxim, there are violation maxim of quantity, maxim quality, maxim relation, and maxim manner. The researcher found 14 data in the transcript of interview Prince Harry and Meghan Markle violation of maxim. It can be seen from the dialogue of this couple and the interviewer. The factors that influence the Prince Harry and Meghan Markle more often violate the maxim in conversation because they are not really sure of what their answer of their assumption.

From explanation above, it can be concluded that every conversation has use 4 types of maxim. And in conversations there are also violation of maxim in the transcription of interview Prince Harry and Meghan Markle.

5.2 Suggestion

The study of pragmatics, especially cooperative principle is quite important for the next researchers who concern with communication in social life. Because in cooperative principle can reach some point or some goals of conversation with the other person. This research provides several suggestions for the next researcher who analyzes cooperative principle. They can also analyze how cooperative principle use in social lifes using the theory of cooperative principle that have been developed by Strauss.

Based on conclusion of the research, the research purposes the following suggestion:

1. To the student of English Department, the writer suggests the students of English Department to do further research using other perspectives or other data sources. It is better to try new things that challenge the example an analysis of cooperative principle in teaching process or social media.
2. For other researchers, other researchers can conduct further research on more specific cooperative principle, with interesting studies, more bigger data, and get more deeper analysis techniques to get the perfect results.
