

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

In this chapter, the researcher describes conclusions and suggestions. The conclusions and suggestions were drawn based on the result of the data analysis.

5. 1 Conclusions

The second-year students' at the English Department of Bung Hatta University were difficult to express their arguments in English because they were too shy to talk in English. They were afraid of making mistakes or their friends laughed at them, and they were also anxious because they had a lack of vocabulary to speak. Based on the result of the data analysis, the researcher concluded that:

1. In general, the students' speaking ability in the debate at the English Department of Bung Hatta University was very high. It was proved by fact from 37 students that 21 students (56,76%) had very high ability, 16 students (43,24%) had high ability, 0 students had moderate ability, and 0 students had low ability.
2. The ability of the second-year students as the debater in expressing arguments of the debate at the English Department of Bung Hatta University was low. It was proved by fact from 37 students that 6 students (16,22%) had very high ability, 12 students (32,49%) had high ability, 0 students had moderate ability, and 19 students (51,35%) had low ability.
3. The second year of students' speaking ability in using appropriate vocabulary in delivering debate at the English Department of Bung Hatta

University was very high. It was proved by fact from 37 students that all students (100%) had very high ability.

4. The second-year students' speaking ability in using correct grammar in delivering debate at the English Department of Bung Hatta University was low. It was proved by fact from 37 students that 2 students (5,40%) had very high ability, 3 students (8,11%) had high ability, 0 students had moderate ability, and 32 students (86,49%) had low ability.

5. The ability of the second-year students as the debater in pronouncing the words in delivering debate at the English Department of Bung Hatta University was very high. It was proved by fact from 37 students that all students (100%) had very high ability.

6. Second-year students' fluency in delivering debate skills at the English Department of Bung Hatta University was very high. It was proved by fact from 37 students that 33 students (89,19%) had very high ability, 4 students (10,81%) had high ability, 0 students had moderate ability, and 0 students had low ability.

5. 2 Suggestions

This research was expected to give a contribution to the students, lecturers, and other researchers. The students know their speaking ability as a debater/speaker in the debate. The lecturers' got information about students' ability in speaking as debaters when debating. Then for other researchers, it hopes that the result of this research could be a reference in attending more comprehensive research. Based on the conclusions above, the researcher gives some suggestions as follows:

1. Based on the result of the data analysis, the results of students in expressing arguments and using correct grammar were low. For the lecturers, they are suggested to give more exercises and practice speaking to improve the students' speaking ability in expressing arguments and using appropriate grammar.

2. For the students, they are suggested to practice more, also build their self-confidence and critical thinking, enthusiasm in expressing arguments, especially in the debate. Then students are also suggested to always practice themselves in the use of language, specifically in the use of grammar because it can help them to improve their ability to speak English well.

3. Because the researcher only examined the students' speaking ability in the debate, especially in expressing arguments. The next researchers are suggested to study a debate, especially in expressing arguments and using appropriate grammar. Due to the fact that the second year students had a problem in expressing their arguments in the debate and using appropriate grammar, the researcher hopes that the future researchers will do the research regarding this problem.
