

## **CHAPTER V**

### **CONCLUSION AND SUGGESTION**

This chapter contains the conclusion and suggestion about the research which already been done by the writer, and is based on the result in the previous chapter. In this chapter, the writer also suggests the next researcher who wants to research the same topics and field in pragmatics.

#### **5.1 Conclusion**

Based on the research that has been done, the authors found five emotional expressions contained in Quotes, of the 6 emotions classified by Parrot's Theory the emotion of surprise was not found because in the data there were no Quotes that were suitable to be expressed with the emotion of surprise. From the 53 data analyzed, we can classify the findings of emotional expression, namely 4 emotions of love, 4 emotions of Joy, 32 emotions of Anger, 10 emotions of Sadness, and 3 emotions of Fear. This way of expressing emotions is found in two ways, namely literal and non-literal. Literally, the author uses a dictionary to directly interpret the words from the Quotes, and literally or figurative language Quotes are classified according to Leech's theory (2005) which reveals that there are 7 figurative languages, but in this study, Quotes are classified as non-literal, not much.

#### **5.2 Suggestion**

This study provides several suggestions for other researchers who want to analyze those who analyze emotional expression in a quote as follows: 1. The findings

of mixed emotion on emotions found. Quotes "Love and Hurts" can be developed by further researchers to be analyzed with other linguistic fields like Semantics

2. Other researchers can also find expressions of surprise emotions that are not found in this "Love Hurts Quotes" data source.

3. Of course, this research can also increase knowledge for other researchers that emotional expression can be studied in the field of linguistics
