

CHAPTER V

CONCLUSION AND SUGGESTIONS

This chapter present conclusion based on what found in this research. This chapter also present some suggestions for the further researchers that research about speech acts, especially directive speech act.

5.1 Conclusion

Based on the research findings, there are some points which are answer the research question.

The distinction of directive speech acts types that found and occurred in the conversation of the characters in the *four brothers* movie are command, suggestion, asking and request. The researcher found 112 data. There are 52 commanding, 9 requesting, 9 suggesting, and 42 asking. Type of speech acts that mostly used in the conversation of the characters in *four brother* movie are commanding and asking. The dialogues of the characters shows it. For example “I told you to go home” sentence indicates a command from the speaker to get hearer back to home.

In this research, the directive speech acts also can be seen in three forms such as imperative, interrogative, and declarative. The researcher found 60 imperative form in this research. 50 imperative used in command, 4 imperative used in suggestion, and 6 imperative used in request.

Then found 2 declarative used in command. Interrogative form found 42 in asking, 5 in suggestion, and 3 in request. In this research, imperative and interrogative form commonly found. It can be seen from the dialogue of the characters.

From the explanation above, it can be concluded that every conversation in *four brothers* movie has many directive speech acts, and there are differences of each character in uttering the utterance.

5.2 Suggestions.

For the next researchers, pragmatics, especially discourse analysis is important in speech act. If we not understand the meaning and the context of speech acts, it can be traps the researchers. So, this research provides several suggestions for further researchers who analyze directive speech acts, so that the further researchers can also research how directive speech acts use different languages using the speech act theory developed by Searle.

So here some suggestions for English Department students, for linguistics students, and for further researchers who doing research on directive speech acts:

1. To the students of English Department, the researcher suggests to do further research using different perspective, and different data sources.
2. To linguistics students, please do a deep understanding of the concept of pragmatics before analyze the directive speech acts.

3. For other researchers who doing research on directive speech acts, other researchers could research more spesific directive speech acts with different data and do more analysis technique to get a different and perfect results.
