## **ABSTRACT**

Inflation is the tendency to increase the prices of goods, unless the increase extends to a large part of the price of other goods. This study aims to analyze how much influence the exchange rate, SBI interest rates and the money supply to inflation in Indonesia. The type of data used in this study is secondary data in the form of time series data and obtained from several government institutions. The estimation method used is multiple linear regression for the period 1998 - 2018. From the results of the study indicate that the exchange rate, SBI interest rates and the money supply have a significant effect on inflation in Indonesia and together all the independent variables have a significant effect on inflation in Indonesia.
