

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

5.1 Conclusions

After data analysis, based on the theories put out by Brown and Levinson (1987), the writer found eight strategies of negative politeness and the factors influence used to show negative politeness strategies from the animation movie *Encanto*.

Eight strategies found by the writer from ten negative politeness strategies. They are; 1) be conventionally indirect, 2) question, hedge, 3) be pessimistic, 4) minimize the imposition, 5) give deference, 6) apologize, 7) nominalize, and 8) go on record. Minimizing the imposition strategy is very dominant in *Encanto* movies. And the factor influence to used of negative politeness that is very dominant is social distance.

The movie is one of the data media that can be studied in terms of politeness strategies. This study has already dealt with negative politeness. For further research it can be studied from another strategy of politeness strategies, or other aspect.

5.2 Suggestions

The writer has found the analysis of negative politeness strategies from *Encanto* movie. The writer makes recommendations to people who want to analyze negative politeness based on this research. The writer also believes that this research may serve as some motivation for future writers who want to conduct more thorough studies on negative politeness based on various data.

From this research, the writer hopes the next researchers to observe more about the other strategies for negative politeness, such as impersonating, and state the FTA as a general rule. It is because those strategies do not discuss in this research. Finally, I believe that this research will be helpful and will serve as a resource for anyone who are interested in conducting more research.
